Dexter + Chaney Delivers Software the Whole Company Can Use
Powerful New Applications Connect the Office and Field

Cloud-based and mobile friendly, Spectrum® Construction Software from Dexter + Chaney continues to expand its set of integrated applications. The latest releases help accounting, project management and field supervisors access and share information wherever they are to keep work moving forward.

Dexter + Chaney Offers:

- Award-winning cloud-based construction business and operations software
- More than 34 years of industry experience
- Enterprise software integrates with native mobile apps
- Customizable Dashboard provides at-a-glance information and apps available to everyone
- Solutions for every business need and industry segment, including job cost accounting, project management, equipment management, service and document tracking and control
- Construction software that's powerful, easy to use and accessible anywhere, on any device

DEXTER + CHANEY

BEYOND BOOKKEEPING

Most construction software systems do a good job of tracking information. Spectrum goes beyond tracking, providing tools that help get work done. Spectrum's new Workflow engine powers both its accounting and operations applications, letting jobsite managers start a process, automatically pass information and task alerts to the office, and vice-versa.

For example, a construction manager starts a change request from the jobsite, generating the actual request form within the system. Spectrum Workflow then takes the field-generated change requests, routes them through the organization for approvals and automatically updates job cost projections. Using Spectrum's Plan Room application, the flow of information and alerts can extend to subcontractors, owners, architects – everyone involved in a project.

LOWERING THE BAR

Software applications are only useful if they can be accessed where and when they are needed. Spectrum's cloud-based architecture puts the power of the system in the hands of everyone with a device with a web browser. Spectrum stands out from the cloud-based crowd by giving clients the choice to host the software themselves or chose enterprise-class hosting services. Either way, they enjoy anywhere, any device access.

By lowering the bar to access, contractors get more out of their software investment. Dexter + Chaney released mobile- and user-friendly apps for remote and jobsite use. Remote users can employ new Spectrum Dashboard Kiosks to quickly access information and perform management tasks from laptops, tablets or other mobile devices. A growing library of Spectrum mobile apps for smartphones help field staff quickly enter information such as time or equipment usage, automatically updating the company's Spectrum system.
